Alternative Energy Is A Solution
The Future. Alternative Energy News publishes articles about renewable energy, new technologies, and anything that will help our civilization use energy and natural resources in a more sustainable and efficient way.

Alternative energy is any energy source that is an alternative to fossil fuel. These alternatives are intended to address concerns about fossil fuels, such as its high carbon dioxide emissions, an important factor in global warming. Marine energy, hydroelectric, wind, geothermal and solar power are all alternative sources of energy. The nature of what constitutes an alternative energy source...

Roeslein Alternative Energy works to help farmers maximize profitability by converting agricultural waste into a valuable resource. Through anaerobic digestion, harvested feedstock and organic waste is broken down into methane and used to produce a pipeline quality Renewable Natural Gas providing a valuable energy resource for land and farm owners.

Biofuels. Biofuels are produced from living organisms or from metabolic by-products (organic or food waste products). In order to be considered a biofuel the fuel must contain over 80 percent renewable materials.

Solar Generators. Using solar energy is a sustainable solution to meeting energy requirements in a variety of circumstances. Besides emergency need for power where traditional sources are compromised, the need for power occurs in remote locations where access to a grid or traditional means of power is, at best, limited.

Alternative energy is energy provided from sources other than the three fossil fuels: coal, oil, and natural gas. Alternative sources of energy include nuclear power, solar power, wind power, water power, and geothermal energy, among others.

Biomass in the energy production industry is living and recently dead biological material which can be used as fuel or for industrial production. It has become popular among coal power stations, which switch from coal to biomass in order to convert to renewable energy generation without wasting existing generating plant and infrastructure.

A collection of quotes about alternative and renewable energy. Because the wind blows during stormy conditions when the sun does not shine and the sun often shines on calm days with little wind, combining wind and solar can go a long way toward meeting demand, especially when geothermal provides a steady base and hydroelectric can be called on to fill in the gaps.

UPCYCLED CARBON BLACK FROM TIRES. Every year, more than 1.5 billion polluting end-of-life tires enter the global waste stream. Until now, there has been no sustainable solution.

Renewable energy is reliable, affordable, and beneficial for our health, our economy, and our
environment. By increasing renewable energy, we can reduce air pollution, cut global warming
emissions, create new jobs and industries, diversify our power supply, and decrease dependence on
coal and other fossil fuels.
